Machine listening: Ab minor, 142 bpm

# Pony, transcribed

The image displays a musical score for a piece titled "Pony". The score is written for voice and piano. The vocal line is in the treble clef, and the piano accompaniment is in the bass clef. The key signature is D-flat major (two flats), and the time signature is common time (C). The lyrics are: "got ta be com- pa- ti- b- le take me to my li- mit". The piano accompaniment features a D-flat minor 7 chord (Dbm7) in the first measure and a G-flat minor 7 chord (Gbm7) in the second measure. The piano part consists of a simple bass line with a few notes in each measure.

got ta be com- pa- ti- b- le take me to my li- mit

Dbm<sup>7</sup> Gbm<sup>7</sup>

“True” Key: D-flat...“minor”, tempo = ca. 70 bpm

# Pony, transcribed

“True” Key: D-flat...“minor”, tempo = ca. 70 bpm

Many other critiques are easy to make:

- “Valence” is too simple
- Does music even always “have” emotions?
- What about genres for which these audio features have no meaning?

# The Paranoid Hypothesis

Hypothesis: Automated music recommendation will tend to homogenize music listening and consumption.

---

<sup>1</sup>Pelle Snickars. "More of the Same—On Spotify Radio". In: *Culture Unbound* 9.2 (2017).

# The Paranoid Hypothesis

Hypothesis: Automated music recommendation will tend to homogenize music listening and consumption.

Pelle Snickars:

*This article concludes that the various forms of public critiques of the inadequate functionality of Spotify Radio are (and were) spot on. In short, it is a service that has not functioned particularly well, at least not as a music recommendation system. By and large, however, Spotify seems to have been aware of its malfunctioning radio service and continued to neglect the issue (for different reasons).<sup>1</sup>*

---

<sup>1</sup>Snickars, “More of the Same—On Spotify Radio”.

# The Paranoid Hypothesis

“Spotify has been really successful in branding themselves as the friendly company that delivers music that everybody really loves. That is in contrast to Facebook, for example. But both are about the same kind of thing: getting data, working with data, knowing everything about your users. So one should also pose more critical questions.”

# How does Spotify make its recommendations?

Problems:

- What are recommendations?
- Black Box
- Knowability

---

<sup>2</sup>Nick Seaver. "Knowing Algorithms". In: (2013). Unpublished draft available on [nickseaver.com](http://nickseaver.com).

# How does Spotify make its recommendations?

Problems:

- What are recommendations?
- Black Box
- Knowability

Nick Seaver:

*There is not one playlisting algorithm, but five, and depending on how a user interacts with the system, her radio station is assigned to one of the five master algorithms, each of which uses a different logic to select music.<sup>2</sup>*

---

<sup>2</sup>Seaver, "Knowing Algorithms".

# Matrix Factorization

Matrix representing users and ratings

$$N = \begin{pmatrix} 0 & 7 & 21 & 0 \\ 5 & 0 & 0 & 1 \\ 4 & 0 & 13 & 9 \\ 0 & 0 & 0 & 7 \\ 19 & 1 & 0 & 13 \\ 0 & 3 & 0 & 0 \end{pmatrix}$$

Andy

Chumbawumba - Tubthumping

Factored into two smaller matrices, with  $f$  factors

Instead, we use a "small" representation for each user & item:  $f$ -dimensional vectors

$$\begin{pmatrix} \cdot & \cdot & \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot & \cdot & \cdot \end{pmatrix} \approx \begin{pmatrix} \cdot & \cdot \\ \cdot & \cdot \\ \cdot & \cdot \\ \cdot & \cdot \\ \cdot & \cdot \\ \cdot & \cdot \end{pmatrix} \begin{pmatrix} \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot \end{pmatrix}$$

(here,  $f = 2$ )

and approximate the big matrix with it.

# Matrix Factorization

(here,  $f = 2$ )

and approximate the big matrix with it.

*Latent factors*

# Factors

Factor < *facere*, to make

Charles Spearman, 1904

- “The proof and measurement of association between two things”
- “‘General Intelligence’ Objectively Determined and Measured. ”

Two factors in test performance, one of which is *g*, “mental energy.”

Spearman on the ontology of *g*:

*Our true correlation in no way deserves the reproach of being a theoretical abstraction, for it only represents the limit to which the observed correlation itself will continually approach.*<sup>6</sup>

---

<sup>6</sup>C. Spearman. “‘General Intelligence,’ Objectively Determined and Measured”. In: *The American Journal of Psychology* 15.2 (1904), pp. 201–292.

L.L. Thurstone, *The Vectors of Mind* (1935), *The Isolation of Seven Primary Abilities* (1936)

- Seven intelligence abilities
- Five personality factors

Eventually, the “Five Factor” model of personality, or, the “Big Five”

## OCEAN and the Big Five

We use the established scientific OCEAN scale of personality traits to understand what people care about, why they behave the way they do, and what really drives their decision making.

**OPENNESS**

Do they enjoy  
new experiences?

**CONSCIENTIOUSNESS**

Do they prefer  
plans and order?

**EXTRAVERSION**

Do they like spending  
time with others?

**AGREEABLENESS**

Do they put people's  
needs before theirs?

**NEUROTICISM**

Do they tend  
to worry a lot?

- Rely upon extensive surveillance.

# Spotify vs. Cambridge Analytica

- Rely upon latent factor model without quibbling much about ontology or epistemology.
- Rely upon extensive surveillance.
- Integrate with Facebook.

Facebook also allowed Spotify, Netflix and the Royal Bank of Canada to read, write and delete users' private messages, and to see all participants on a thread — privileges that appeared to go beyond what the companies needed to integrate Facebook into their systems, the records show. Facebook acknowledged that it did not consider any of those three companies to be service providers. Spokespeople for Spotify and Netflix said those companies were unaware of the broad powers Facebook had granted them. A spokesman for Netflix said Wednesday that it had used the access only to enable customers to recommend TV shows and movies to their friends.
